

A new challenge: Volcanic Supersites as total environmental observatories

Giuseppe Puglisi
INGV – Catania, Italy

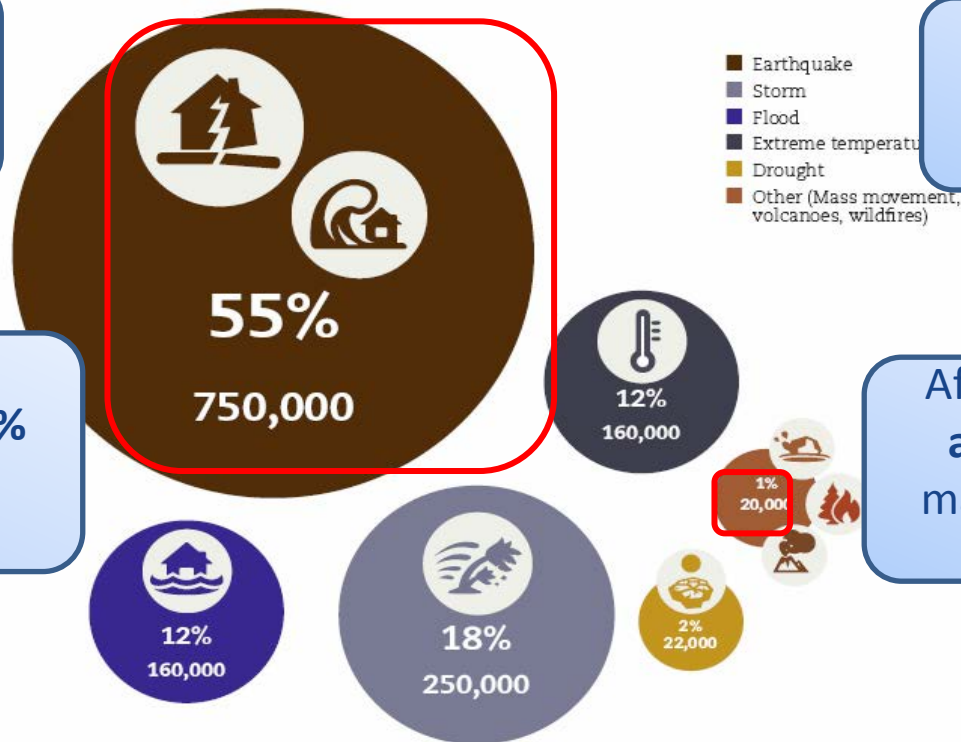

What is a Supersite?

The Supersite concept relates to the study of Geohazards

Geohazard impacts

13% of the total number of disasters

~ 40.000 dead/yr, corresponding to 56% of those caused by natural disasters

Damages for ~40 B\$ per year

Affect >135 M people and 25 M buildings, mainly in undeveloped countries

Statistics CRED 1995-2015

What is a Supersite?

Geohazards: global challenge

- Earthquakes and volcanic eruptions are much less frequent than hydro-met hazards but can have a much larger impact, direct on indirect, on many countries and economy.
- They can trigger cascading events, which may even cause most of the impact.
- They are difficult to study and their global impacts are hard to predict and prevent.

**Action required:
more scientific research!**

Supersite ingredients

Geohazards

Earth Observations

Supersite mandate :

“... to stimulate an international and intergovernmental effort to monitor and study selected reference sites by establishing open access to relevant datasets according to GEO principles to foster the collaboration between all various partners and end-users” (Frascati Declaration, 2007)

GEO-Geohazard Supersite and Natural Laboratories Initiative

Ground-based Observations

Supersites in Europe

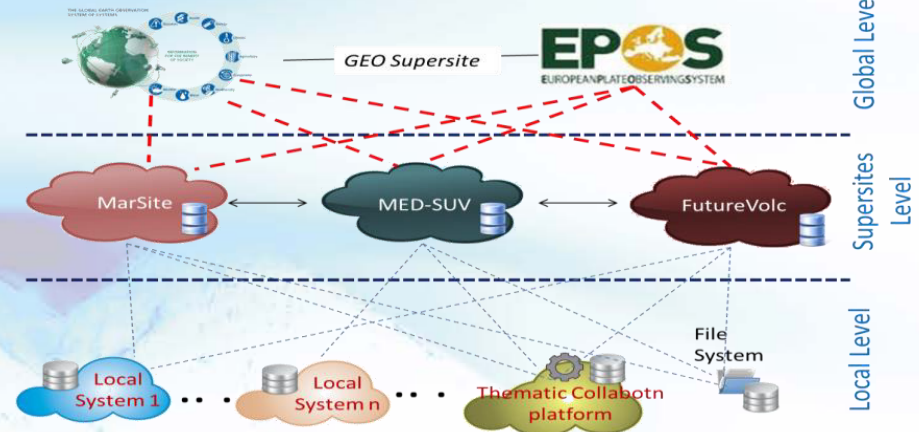

2011

Call: ENV.2012.6.4-2

Expected impact

- Better use and access to observations;
- Advanced monitoring systems;
- Hazard mitigation;
- Coordination among the communities supporting hazard mitigation.

MEDiterranean SUPersite Volcanoes (MED-SUV)

FP7 European Project

EC Contribution: 5.998.851 €

Duration: 36 months (01/06/2013 – 31/05/2016)

Consortium: 24 members belonging to 9 countries

Coordinator: Istituto Nazionale di Geofisica e Vulcanologia

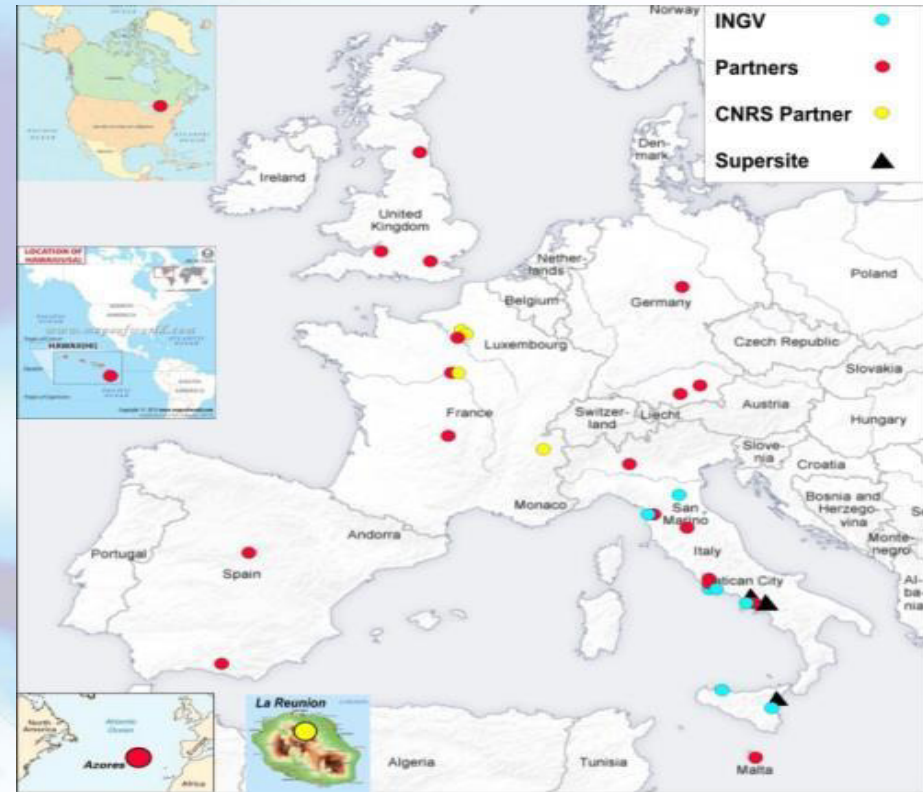

Web site: med-suv.eu

Project portal: medsub_portal.ct.ingv.it

Consortium members

INGV; CNR; AMRA; DPC; DLR; LMU; GFZ; UDUR; UNIVBRIS;
CNRS; BRGM; ESA; CSIC; UGR; UoM; Surveylab; MATEC; T2;
Western; USGS; UMIL; UBP-LMV; CIVISA

MED-SUV e-Infrastructure

Supersites accessible through the e-infrastructure

- Mt. Etna,
- Vesuvius and Campi Flegrei

Space Agencies Nodes

Use of EO data on Mt. Etna area

Sentinel-1A data. December 2014 paroxysmal activity (Bonforte and Guglielmino, 2015).

ERS1/2 & ENVISAT data.
SBAS analysis.
(Solaro et al., JGR, 2010).

ENVISAT data.
Pernicana Fault
Earthquake:
April 2, 2010
(Guglielmino et al.,
EPSL 2011)

ERS1/2 data.
July-August
2001 eruption.
(Puglisi et al.,
JGR, 2008).

Use of EO data on Mt. Etna area

Volcanic ash retrieval at Mt. Etna using Avhrr and Modis data

Claudia Spinetti*, Stefano Corradini , Maria F. Buongiorno

NOAA 18 AVHRR image (24/11/2006; 11:20 GMT)

NASA Terra MODIS image (24/11/2006; 12:20 GMT)

Sentinel-2A image recorded the 16/03/2017 at 10:45 GMT (11:45 CET) by the Copernicus Sentinel-2A satellite.

The red hot lava flowing from Mount Etna can be seen clearly in the image. The surrounding snow has been processed in blue to distinguish from the clouds.

12:15 GMT

18:00 GMT

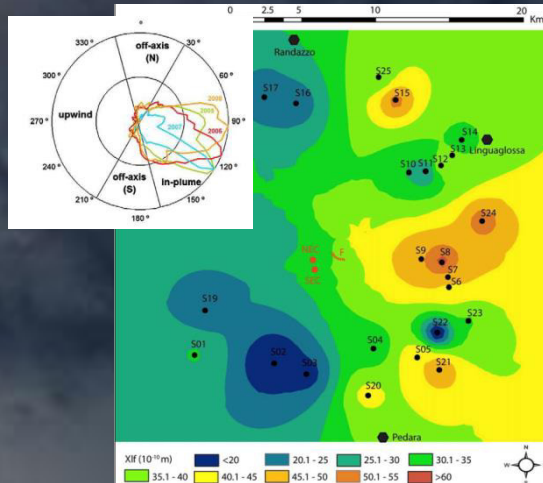

Workshop, Brussels 10 Jan. 2018
(Bonaccorso et al., 2013 BV)

Volcanoes create a special environment

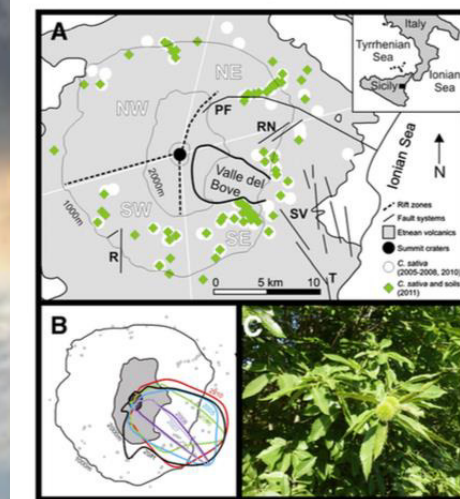

Plume fingerprinting in the critical zone
Liotta et al., 2016

A persistent volcanic plume supplies volcanogenic elements through rainfall and dry deposition with implication on water, soil, and vegetation

Bioremediation of volcanic dispersion and deposition - Quayle et al., 2010; Martin et al., 2012

The volcanic environment:

Chemical weathering

Interface reactions between rock-derived chemicals and biota

Diffuse emission of magmatic and biogenic carbon dioxide

Diffuse Carbon degassing – Allard et al., 2001

Water-Rock interaction
Pennisi et al., 2000

Lava flow – Vegetation interaction
Del Moral and Poli Marchese, 2010

New objective: to study the effects of volcanic activity on environment and ecosystem dynamics by exploiting Supersite's resources

Aside hazard assessment and risk mitigation for civil protection purposes, **IT IS CRUCIAL** to integrate data and models of **DIFFERENT CROSS-DOMAINS** to evaluate the **IMPACT AND ROLE of VOLCANIC PHENOMENA** on the changes recorded in mountain ecosystems and environments (**GEOSPHERE-BIOSPHERE-HYDROSPHERE-ATMOSPHERE INTERACTIONS**).
